

# Module 5 Challenge Submission File

### **Archiving and Logging Data**

Make a copy of this document to work in, and then for each step, add the solution command below the prompt. Save and submit this completed file as your Challenge deliverable.

#### **Step 1: Create, Extract, Compress, and Manage tar Backup Archives**

1. Command to **extract** the TarDocs.tar archive to the current directory:

tar xvvf TarDocs.tar

2. Command to **create** the Javaless\_Doc.tar archive from the TarDocs/ directory, while excluding the TarDocs/Documents/Java directory:

```
tar cvvf Javaless_Docs.tar */ --exclude=
/home/sysadmin/Projects/TarDocs/Documents/Java/
```

3. Command to ensure Java/ is not in the new Javaless\_Docs.tar archive:

```
tar -tvf Javaless_Docs.tar | grep Java
```

# Optional

4. Command to create an incremental archive called logs\_backup.tar.gz with only changed files to snapshot.file for the /var/log directory:

```
sudo tar --listed-incremental=snapshot.file -cvzf logs_backup.tar.gz
/var/log
```

#### Critical Analysis Question

5. Why wouldn't you use the options -x and -c at the same time with tar? It's not possible to run them at the same time since -x extracts the files, while -c creates the files.

#### **Step 2: Create, Manage, and Automate Cron Jobs**

1. Cron job for backing up the /var/log/auth.log file:

```
sudo tar -czvf auth_backups.tgz /etc/cron* /var/log/auth.log
06 * * 3 tar -zcf /auth_backup.tgz /var/log/auth.log
```

#### **Step 3: Write Basic Bash Scripts**

1. Brace expansion command to create the four subdirectories:

```
sudo mkdir -p ~/backups/{ freemem diskuse openlist freedisk }
```

2. Paste your system.sh script edits:

```
#!/bin/bash
free-h > /home/sysadmin/backups/freemem/free_mem.txt
du -h 2>/dev/null > /home/sysadmin/backups/diskuse/disk_usage.txt
lsof 2>/dev/null > /home/sysadmin/backups/openlist/open_list.txt
df -h > /home/sysadmin/backups/freedisk/free_disk.txt
```

3. Command to make the system.sh script executable:

```
sudo chmod +x system.sh
```

#### Optional

4. Commands to test the script and confirm its execution:

```
cat ~/backups/freemem/free_mem.txt
cat ~/backups/diskuse/disk_usage.txt
cat ~/backups/openlist/open_list.txt
cat ~/backups/freedisk/free_disk.txt
```

5. Command to copy system to system-wide cron directory:

```
sudo cp ~/system.sh /etc/cron.weekly
```

## Step 4. Manage Log File Sizes

1. Run sudo nano /etc/logrotate.conf to edit the logrotate configuration file.

Configure a log rotation scheme that backs up authentication messages to the /var/log/auth.log.

a. Add your config file edits:

```
/var/log/auth.log {
weekly
rotate 7
notifempty
compress
delaycompress
missingok
}
```

#### Optional Additional Challenge: Check for Policy and File Violations

1.	Command	to	verify	`auditd`	is active:
----	---------	----	--------	----------	------------

2. Command to set number of retained logs and maximum log file size:

[Enter answer here]

Add the edits made to the configuration file:

[Enter answer here]

3. Command using auditd to set rules for /etc/shadow, /etc/passwd, and /var/log/auth.log:

[Enter answer here]

Add the edits made to the rules file below:

[Enter answer here]

4. Command to restart auditd:

[Enter answer here]

5. Command to list all auditd rules:

[Enter answer here]

6. Command to produce an audit report:

[Enter answer here]

7. Create a user with sudo useradd attacker and produce an audit report that lists account modifications:

[Enter answer here]

8. Command to use auditd to watch /var/log/cron:

[Enter answer here]

9. Command to verify auditd rules:

[Enter answer here]

# **Optional (Research Activity): Perform Various Log Filtering Techniques**

1. Command to return journalct1 messages with priorities from emergency to error:

[Enter answer here]

2. Command to check the disk usage of the system journal unit since the most recent boot:

[Enter answer here]

3. Command to remove all archived journal files except the most recent two:

[Enter answer here]

4. Command to filter all log messages with priority levels between zero and two, and save output to /home/sysadmin/Priority\_High.txt:

[Enter answer here]

5. Command to automate the last command in a daily cron job. Add the edits made to the crontab file below:

[Your solution cron edits here]
